A table row should be included for every floor of the building (both floors included and excluded from the scope) and identify the total square feet vacant and occupied and the percentage of total square feet vacant on the floor. If the property was 100 percent vacant, a statement of vacancy may be provide in place of a floor-by-floor breakdown.

12. Cost-Benefit Analysis and Job Commitments

PROVIDE AS ATTACHMENTS C9 and C10

Definition: Weighted preference for projects with the greatest return on investment (ROI) and job commitments already in place. The score is based on the result of the cost-benefit analysis performed on the project (6 points) and the percentage of the project space that already has an end user commitment in place (4 points).

Cost-Benefit Analysis (6 points)

Complete the cost-benefit information on Page 27 and provide required attachments as Attachment C9. The Ohio Development Services Agency will conduct a cost-benefit analysis based on this data and award up to six points based on the ROI from the project to state and local governments, using the scoring rubric found on Page 25.

Cost-Benefit Analysis Information Instructions

Use the below instructions to complete the cost-benefit analysis information on Page 27. For all data provided, provide documentation or references for the sources of the data. Acceptable documentation include, but are not limited to, project pro formas, market studies, contractor/architect projections, business plans and labor or housing statistics. No data should be provided as ranges.

1. Property Market Value and Proposed End Use: Input the current property market value based on a recent sale, real estate appraisal or the county auditors record and project an estimated future market value following the rehabilitation. For each end use, input the percentage each will occupy in the proposed project, based on the total project area. The analysis will use this data to calculate property tax.

2. Construction Employment: Input projected annual employment (in whole numbers) and average wages for the construction personnel that will be necessary to complete the rehabilitation project. Non-staged (24-month) projects should only include impacts during the first two years. The analysis will use this data to calculate income taxes.

3. Operations Employment: Input projected annual employment (in whole numbers) and average wages for the operations (e.g. management) and occupants (e.g. tenants) employees that will work in the rehabilitated building. The analysis will use this data to calculate income taxes.

4. Gross Receipts and Sales: Input the total gross sales each from operations (e.g. rents) and tenants (e.g. sales) that are projected in the rehabilitated building. The analysis will use this data to calculate sales taxes.

5. Residential Occupants: For projects that include a residential component, input the number of residents (in whole numbers) that will live in the rehabilitated building and their average annual income. This analysis will use this data to calculate income taxes.

The Ohio Development Services Agency will conduct a cost-benefit analysis based on the provided data and award up to six points based on the return on investment (ROI) from the project to state and local governments, using the below scoring rubric.
